Professional Summary

Computer Science student specializing in software systems and digital innovation. Experienced in building data-driven applications, coordinating cross-functional initiatives, and supporting research-driven technology projects. Strong interest in digital transformation, process improvement, and leveraging technology to enhance operational efficiency in banking and financial services.

Education

De La Salle University **2022 – Dec 2026**
Bachelor of Science in Computer Science, Major in Software Technology *Manila*

Technical Skills

Languages: C, C#, C++, Python, JavaScript, SQL
Frontend: React, TypeScript, Next.js
Backend: Node.js, Django, REST APIs
Tools: Git, GitHub, Terraform, Azure DevOps

Experience

ING Hubs Philippines **April 2026 – September 2026**
Intern, OnePipeline Code & Build
- Automated GitHub onboarding by developing Azure DevOps pipelines and supporting platform migration initiatives.
- Designed and implemented an Azure Cosmos DB solution to track GitHub onboarding status and migration progress across teams.
- Worked with Azure, Terraform, CI/CD pipelines, Microsoft Graph, and GitHub integrations on enterprise-scale DevOps and platform engineering initiatives.
- Enhanced Azure DevOps work item management services, including field synchronization and layout updates.

Google Developer Student Club **October 2023 – December 2024**
Industry Partnerships Officer
- Coordinated communication between external partners and internal teams.
- Prepared proposals, presentations, and documentation for meetings and project collaborations.
- Tracked partnership deliverables, followed up on action items, and maintained structured engagement records.
- Developed stakeholder management and professional communication skills through partner coordination.

Projects

Distributed Database System | Advanced Database Project *(Course Project)* **August 2024 – December 2024**
- Designed and implemented a distributed database system using Django with multi-master replication.
- Implemented synchronization mechanisms and transaction isolation handling to support high concurrency.
- Explored consistency trade-offs and concurrency challenges in distributed environments.
- Gained hands-on experience with replication, conflict handling, and system reliability.

DrumXRoll | XR Drum Improvisation & Learning System *(Thesis Project)* **September 2024 – March 2026**
- Built a real-time XR drumming system in Unity using MIDI- and sensor-based input to deliver interactive XR feedback.
- Conducted user evaluations with 12 participants, measuring user experience, input responsiveness, and cognitive load.
- Validated real-time XR interaction across 6 progressive lessons and 2 visualization modes, demonstrating consistent MIDI-driven visual feedback throughout the training sequence.

Emberlands | Emotional Mapping & Reflective Visualization *(Personal Project)* **November 2025 – December 2025**
- Designed and built a web app that transforms user-provided emotional data into an explorable 3D landscape using Three.js.
- Implemented 8 visualization modes to represent different emotional states or intensities.
- Prototyped and tested 3 interaction flows, iterating on the visual experience.
- Developed a mapping approach for translating continuous emotional input into discrete visual states while preserving nuance.
